EXPERIENCE

AI Engineering Intern — *Copenhagen, Denmark*
Juris Legal — AI Legal Startup — February 2026 – Present

- Architected an evaluation framework for a production legal RAG system, replacing manual answer validation with automated scoring and saving **5+ hours** of manual review time
- Integrated LLM-as-a-judge pipelines using LangWatch and **Azure OpenAI** to score legal responses against retrieved context and reference answers
- Built a golden dataset of legal Q&A pairs capturing the multidimensional complexity of the legal domain, establishing a repeatable benchmark for the **RAG system**
- Tools: FastAPI, LangChain, Azure OpenAI, FAISS, Azure Analytics, LangWatch

Jr. Machine Learning Engineer — *San Diego, CA*
SDSU Research Foundation — July 2024 – August 2025

- Engineered and deployed a Siamese Neural Network for DNA base classification, achieving **95%** accuracy
- Built an end-to-end ETL pipeline to extract raw sequencing data, transform features into model-compatible formats, and load clean datasets for training
- Reduced model testing time by **50%** by integrating GitLab CI/CD to automate preprocessing, training, and deployment
- Accelerated training performance using CUDA acceleration and tracked experiments with MLflow

Software Developer Intern (Remote) — *Dublin, Ireland*
Sports Impact Technologies — Wearable Head-Impact Sensor Startup — June 2023 – August 2023

- Built the company's first production-ready web application, implementing responsive front-end architecture in HTML, CSS, and JavaScript to support customer engagement and lead generation
- Integrated REST APIs to automate email workflows handling roughly 30 emails per week and power real-time form validation

PROJECTS

BatchPhoto Studios
Electron, Python, Rembg, HTML, CSS, JavaScript

- Engineered a cross-platform desktop app for automated background removal and file renaming, delivering a 5x improvement in batch photo processing speed for end users

Attendance Tracker
React, TypeScript, Vite, Tailwind, PostgreSQL, Node.js

- Developed a full-stack client management system for Unified ESL service providers with real-time data sync via Supabase
- Achieved a 40% improvement in attendance tracking efficiency by automating manual processes

EDUCATION

University of Copenhagen — Expected June 2027
Master of Science, Computer Science

University of California, Davis — June 2024
Bachelor of Science, Computer Science

LANGUAGES & TECHNOLOGIES

Languages: Python, C++, Java, JavaScript, TypeScript, SQL

AI/ML: PyTorch, LangChain, FastAPI, Azure OpenAI, FAISS, Scikit-learn, NumPy, pandas, MLflow, CUDA

Tools & Platforms: GitLab CI/CD, PostgreSQL, Supabase, Vercel, Electron, Git
